Color Experience

Harsh wood flooring

The perfect choice for comfortable floor heating

Fast heat conduction

Harsh wood uses a direct installation method, which does not create a hollow layer with the radiation source, conducts heat faster and is more energy-saving.

Environmental health

Qingqing wooden floor is made of recycled and renewable pure natural cork oak bark. All products are imported from Europe and are low-carbon and pollution-free, from ecology to home use.

Good stability

Cork can withstand -600C~800C without deformation, the paving area is not limited, and close-fitting closing can be achieved.

Comfortable, skin-friendly touch

The physical structure of cork is similar to that of skin, so it has a comfortable, skin-friendly touch.

Flexible and elastic

40 million/cm³ sealed air bag cell structure, nearly 50% air, has excellent elasticity when walking on it, which can effectively relieve fatigue.

Easy to clean

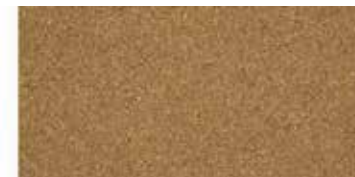

Harsh wood flooring is made of natural cork oak bark. Its airtight airbag physical structure does not absorb water, oil, or penetration. Just wipe it with clean water, so you don't have to worry about hygiene and cleanliness even in the kitchen or bathroom.

MAKE YOUR FLOOR CLIMB THE WALL

Simple integration of the wall and floor.

Cork Flooring

Warm, elastic, and non-slip floor solution

Different from ordinary floors, cork floors have a comfortable cork surface layer, which brings a warm feeling to the feet. The cork silent pads on the bottom layer make the space more comfortable. The installation eliminates complicated processes, is convenient and fast, and can be disassembled for secondary use.
